Experiment – 9 : AI and Analytics using Zia

Aim

To integrate AI-powered analytics into the Event Desk event management platform using Zoho Creator's Zia capabilities to analyze registration data, generate insights, visualize participation statistics, and support data-driven event management.

Theory

Zoho Creator's Zia is an AI-powered assistant that helps users build applications, analyze data, and configure application components using natural-language instructions. In the Event Desk platform, Zia capabilities are used to support event registration management, dashboard creation, workflow configuration, and registration analytics.

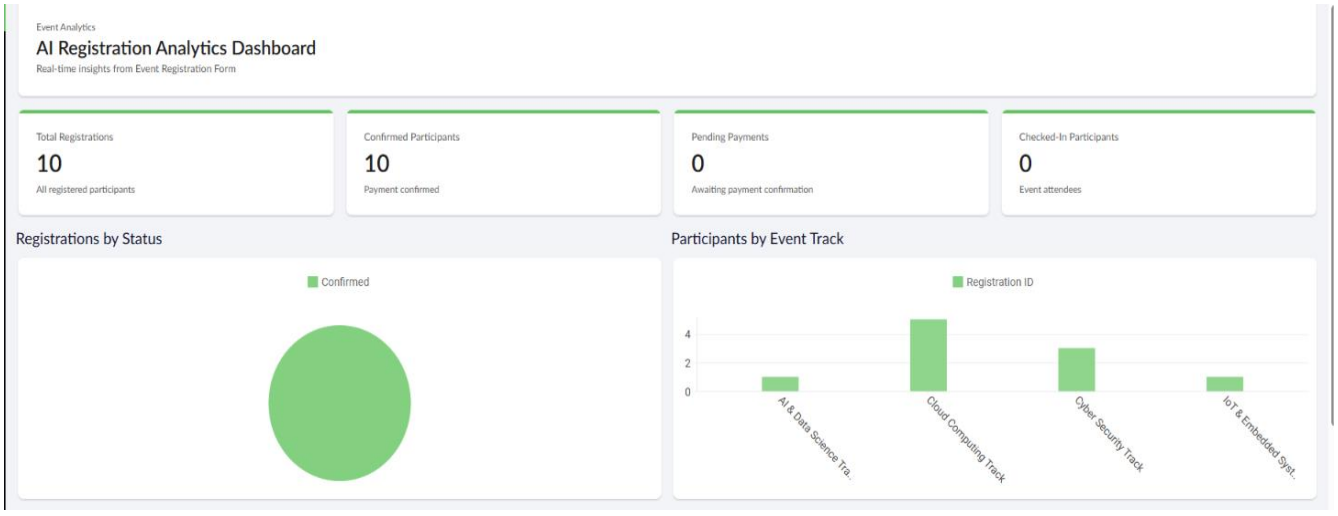

The platform includes the following AI and analytics features:

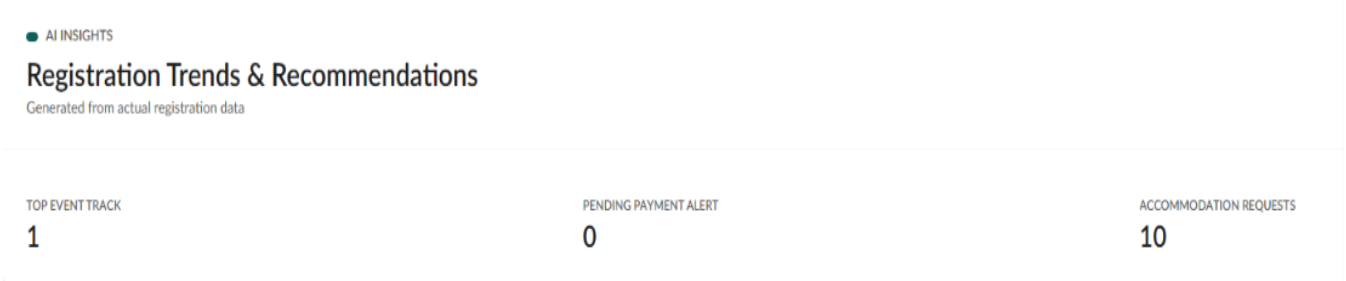

1. **AI Registration Analytics Dashboard:** Presents key performance indicators (KPIs), charts, and an AI Insights panel to support registration analysis.
2. **Registration Status Analysis:** Uses registration data and status categories such as Pending Payment, Confirmed, and Checked-In to monitor registration progress.
3. **Participation Analytics:** Organizes participation-related information into dashboards and visualizations for easier interpretation.
4. **Workflow Assistance:** Supports the configuration and review of registration confirmation, pending-payment reminders, status synchronization, duplicate prevention, update notifications, and target monitoring.
5. **Natural-Language Application Assistance:** Uses Zia prompts to analyze application configurations, identify potential improvements, and recommend suitable changes.
6. **Data-Driven Decision Support:** Uses dashboard KPIs and charts to help administrators understand registration trends and monitor event participation.

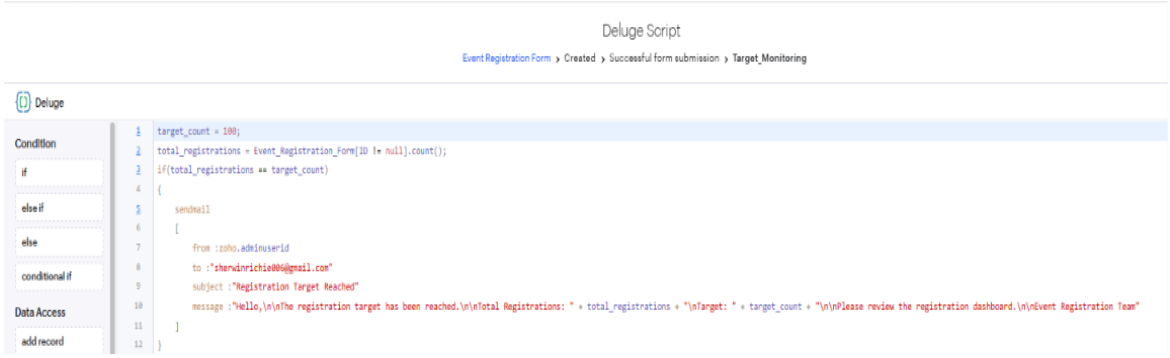

Procedure

1. Open the Event Desk application in Zoho Creator.
2. Access Zia and provide natural-language prompts for the required application analysis and configuration tasks.
3. Create or review the AI Registration Analytics Dashboard.
4. Include relevant KPIs, charts, and an AI Insights panel for registration analysis.
5. Review registration status categories and participation-related data.
6. Configure and review the registration workflows required for event management.
7. Examine the generated dashboard components and analytics for relevance and clarity.
8. Review Zia's recommendations and identify opportunities to improve registration monitoring and reporting.
9. Verify that the dashboard displays the available registration information correctly.
10. Use the dashboard insights and visualizations to support event management decisions.

Result

AI-assisted analytics and application configuration were explored in the Event Desk event management platform using Zoho Creator's Zia capabilities. The AI Registration Analytics Dashboard provides KPIs, charts, and an AI Insights panel for examining registration information. Registration status analytics, participation visualizations, and workflow analysis support improved visibility into event registration activities and help administrators make data-informed decisions.
