Experiment – 5 : Reports, Dashboards, and UI Builder

Aim

To design and organize reports, dashboards, and user interface components in the Event Desk platform using Zoho Creator to display participant information, monitor registration status, visualize event statistics, and provide an organized interface for event management..

Theory

Zoho Creator provides reporting, dashboard, and UI-building features that help developers organize application data, visualize important information, and create user-friendly interfaces. In the Event Desk event management platform, these features support participant monitoring, registration analysis, and efficient event administration.

The platform uses the Event_Registration_Form form to store participant registration details and the Event_Registration_Report report to display and manage the stored records.

The following components are used in the platform:

1. Event Registration Report

The Event_Registration_Report displays participant registration records collected through the registration form. It helps organizers view participant details, check registration information, and manage records. Displayed columns can be organized to make the report easier to read.

2. Registration Status Board

The Registration Status Board provides a view of participant registration statuses, including Pending Payment, Confirmed, and Checked-In. It helps organizers monitor registration progress and identify participants based on their current status.

3. Participation Dashboard

The Participation Dashboard presents participant-related information in a visual format. It helps organizers understand registration activity and review participation information without manually examining every record.

4. AI Registration Analytics Dashboard

The AI Registration Analytics Dashboard organizes registration-related metrics, charts, and insight components in a single view. It supports the analysis of registration information and helps organizers review important event statistics.

5. Charts and Data Visualization

Charts convert registration data into visual representations, making it easier to identify patterns, compare registration categories, and understand participant distribution. The usefulness of each chart depends on its selected data source, fields, and configuration.

6. UI Builder and Page Design

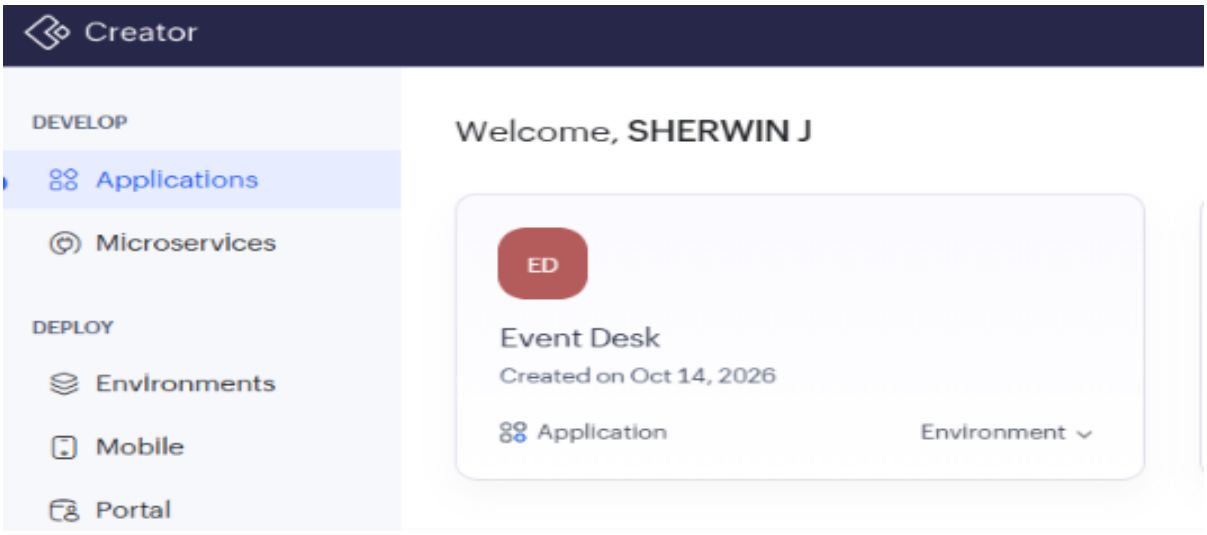

Zoho Creator's page and interface-building features allow components such as reports, charts, forms, and summary information to be arranged into a structured application interface. Proper layout and organization improve navigation and make important information easier to access.

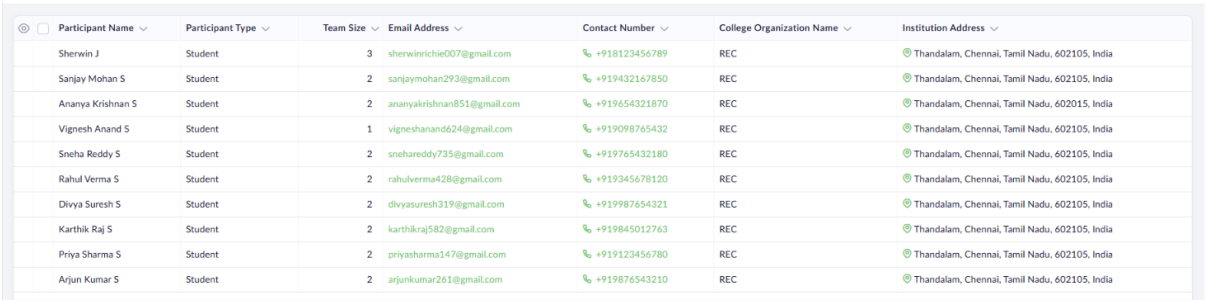

Procedure

1. Open the Event Desk application in Zoho Creator.
2. Open the Event_Registration_Form and review the participant fields used to collect registration information.
3. Open the Event_Registration_Report and review how participant records are displayed.
4. Organize the report columns to show the necessary participant details clearly.
5. Open the Registration Status Board and review how registration statuses are presented.
6. Check the status categories, including Pending Payment, Confirmed, and Checked-In.
7. Open the Participation Dashboard and review its participant-related charts and visual components.
8. Open the AI Registration Analytics Dashboard and inspect its key performance indicators, charts, and insight components.
9. Review the data sources and field selections used by the dashboard components to ensure they correspond to the intended registration information.
10. Use the page or UI-building interface to organize components into a clear and accessible layout.
11. Review page names, component placement, and navigation to ensure that users can access the required reports and dashboards easily.
12. Preview the application and check whether the reports, charts, and dashboard components display the expected information.

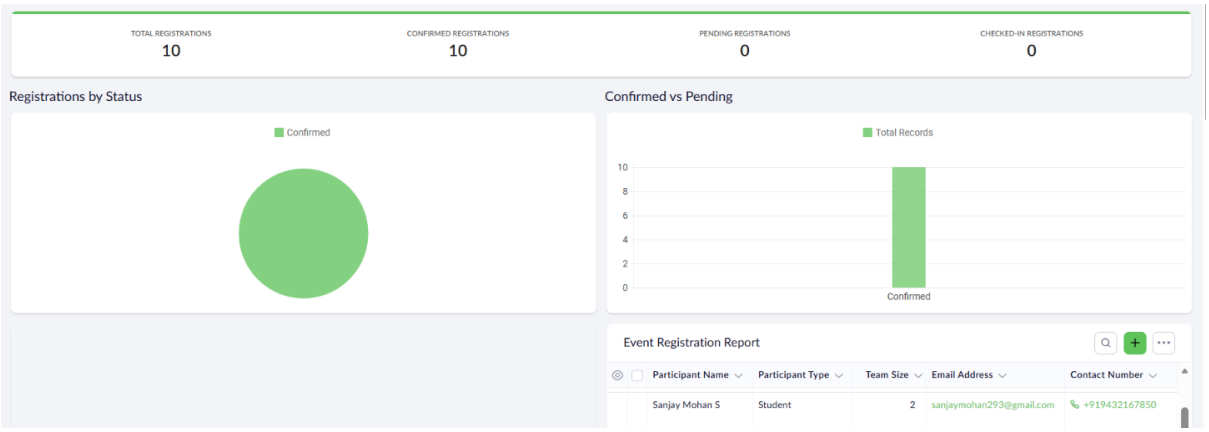

13. Verify that the displayed participant information corresponds to the records stored in the registration form.
14. Make any necessary layout or display adjustments and save the updated configuration.

Result

Reports, dashboards, and UI-building features in the Event Desk event management platform provide an organized way to view participant records, monitor registration statuses, and analyze event-related information. The registration report supports record management, while the Registration Status Board, Participation Dashboard, and AI Registration Analytics Dashboard provide different views of registration activity. A well-organized interface improves accessibility and makes important information easier to review. The accuracy of the displayed information depends on the report configuration, data sources, chart settings, and page layout.
